

Appendix

Commentary in on Settlement Basis in Respect of GI in East Lindsey

Key

C - COMMUNITY - 300 m of an accessible natural greenspace of at least 2 ha

L - LOCAL - At least one accessible 20 ha site within 2 km

M - MEDIUM - At least one accessible 100 ha site within 5 km

S - STRATEGIC - At least one accessible 500 ha site within 10 km -

NB These titles have been given for ease of description for the purpose of the East Lindsey GI Audit and are not used elsewhere.

Village	Commentary	Standard of Provision
Aby	<p>There are no sites that individually meet the Community level of provision, however, when the local circular footpath routes are added to smaller local areas of greenspace, there is almost 2ha of space available to the local population. Tothill, Mother and Greenfield and Swinn Woods are more than capable of meeting the size requirements for the local level of provision but are not currently publically accessible. A cluster of seven smaller contiguous sites at Swaby Valley provide an area of 22.59ha, over half of which is accessible, including a Lincolnshire Wildlife Trust Reserve. Below the size threshold there are also a number of smaller sites that are accessible or partially accessible, which contribute to opportunities for people and wildlife, including Rigsby Wood Trust Reserve (15.15ha). At a medium level Burwell Wood, and a number of other contiguous sites meet the standard, although formal access to the sites is very limited. There are no strategic scale sites in this area. The Public Footpath Network is good and would allow predominantly off road walking around most of the village and a round walk to Belleau of 3 km (1.75 miles) and approximately 1.4ha of footpath access.</p>	L M * F
Addlethorpe	<p>Addlethorpe Golf Course is large enough to meet the community level of provision but has no open access through public footpaths and only being available to paying customers. If the local footpath is added to smaller scale provision, there is almost 2ha of greenspace available to the local community. At a local scale, the beach is within the 2km threshold and provides an extensive area of natural recreation space and this clearly covers the medium and strategic level of provision as well. However, a greater</p>	LMS

	variety of sites would help improve opportunities; there are also few sites at a smaller scale.	
Alford	There is not a high level of Green Infrastructure in and around Alford. There are sites that meet the size required for community level accessible space in the school playing fields and the football club, however, these are not publically accessible at all times. If access could be arranged, this would help the situation. There are smaller pockets, such as the Memorial Park, churchyard and cemetery that are valuable open spaces in the town, and these total 1.7ha, however, there is a round Alford walk that supplements public access and if this is added, this increases the area to 4.92ha which cumulatively meets standard. There are no sites available at the local or strategic level. Hoplands Wood, at 23ha is a useful local resource, but is more than 2km from the town, as required by the ANGSt criteria. At a medium scale, Welton High and Low Woods and adjacent sites are capable of provide the required level of space, they are not accessible. Any open space provided through future growth will make a valuable contribution to the availability of open space in the town.	C F
Alvingham	The churchyard is the only area of natural greenspace within the village, 0.538ha, however, there are good footpaths in the vicinity of the village, one of which goes all the way to Louth, but they do not form a circulate route. When these are added to provision locally they increase the available space significantly. There are no sites at a local level. However, there is provision at the medium and strategic scale.	MS F
Anderby	Anderby is a linear settlement so this makes access harder where space appears at one end of the village. What meets the ANGST criteria for one end of the village is not necessarily the same at the other end. The beach and LWS provide accessible community level space for Anderby Creek. The churchyard provides the only open	CLMS F

	<p>space within Anderby and there is a circular walk around the part of the village providing a further 1.75ha of space. The beach provides a good local resource at a local level for the enabling the community level to be met for Anderby Creek, the local level for the eastern part of Anderby Village and the medium level for the rest of the village. The strategic level is therefore also met.</p>	
Antons Gowt	<p>Anton's Gowt has community level provision through two sites along the adjacent waterways, one leading to Witham Country Park (2.5km away). There is a deficiency above this level; however, the coast is only just over the 10km threshold for the strategic level of provision.</p>	C
Ashby by Partney	<p>The churchyard (0.3ha) is the only greenspace within the village, although the local footpath network adds a further 1.02h. No sites are available to meet the local level of provision. At a medium scale there is a cluster of site (Welton Woods) that meets standards but there is no evidence that this is formally accessible; if it could be made so then medium standards could be met. There are no strategic larger scale sites within the 10km catchment.</p>	
Authorpe	<p>The only greenspace within the village is the churchyard (0.18ha) but when the local footpath network is added to this, there is over 3.5ha of space available. There is a site that meets the local criteria but there is has no public access, however two smaller contiguous sites (Muckton Wood and Muckton Wood East) do combine to meet the local standard and are partially accessible, as Muckton Wood is a Lincolnshire Wildlife Trust Reserve. There are also a few other small areas of mainly woodland round the village which have public footpath access to them but not within them. Burwell Wood cluster meets the medium standard, although there is only formal access to a small part of this. There is no strategic site within 10km. The public footpath network is good in this area.</p>	CLM F

Bag Enderby	The churchyard (0.12ha) is the only public open space within the village, but when the looped footpath network is added this increases to 2.5ha. There are a number of sites within 2km including Local Wildlife Sites and Sites of Special Scientific Interest, but these are smaller than the size required and none of these have formal access. Snipe Dales is within 5km of the village, although it falls a little below the size criteria for medium level provision but is still an important local resource of a significant size.	
Baumber	The churchyard (0.548ha) is the only site within Baumber but when the footpaths in the and around the village area added, there is a further 1.55ha. There are no sites able to meet the criteria within Natural England's standards at a local level of provision. At a medium level, Sotby Wood provides sufficient size space. Chambers Farm Wood complex of sites totals 340ha and is a significant and important local resource although it falls just outside the 5km radius for medium level provision and is smaller than the 500ha required for strategic, nonetheless, it provides a significant and valuable resource for the local community and biodiversity. Strategic provision is not available but his applies equally to all settlements in the south western part of the District.	M
Belchford	Recent efforts from the Parish Council show that there is a desire to increase the amount of open space within the village. Current space is comprised of the churchyard (0.489ha) and circular routes (predominantly off road) add another 5.5ha of greenspace; one of these footpaths leads to a cluster of LWSs of 28.967ha 1.4km away. Together, these meet the local standard. There are no sites meeting the medium standard, although there are smaller sites that add to provision (such as a cluster of sites at Goulceby comprising 25.9ha which has a good degree of accessibility and Legbourne Wood Trust Reserve at 35ha) but fall	L

	below the 100ha required within 5km. There is no strategic green infrastructure in this part of the District.	
Benniworth	Within Benniworth accessible greenspace is focused on the churchyard (0.751ha) and the public footpath network, which adds a further 2.96ha of space. There is a good level of green infrastructure provision at other levels. Provision at the local scale which is as a result of clusters of site (Benniworth Haven); although not all parts are accessible, more than enough of the site has access to meet the required standard and there is good footpath access to it from the village. There is also medium scale provision, at Sotby Wood, and strategic provision at Willingham Woods. There a quite a few sites within 5km of Benniworth some of which have public access but fall below the required size level but which add to local provision.	LMS
Bilsby	The churchyard provides (0.664ha) of greenspace within the village and a looped footpath network to the west of the village adds a further 1.4ha. Elsewhere, there is a Lincolnshire Wildlife Trust Reserve of 23ha (Hoplands Wood) within 5km of the village, as is Rigge Wood (9.75ha) which has public footpath access, although these fall below the NE standards of 100ha within 5km but do help provide some accessible greenspace for the village. There is also a woodland site of 48ha within 5km (Mother and Greenfield Woods) but which does not have formal public access. It is unlikely that the future levels of development Bilsby will be sufficient to enable NE standards to be met through development; however, any opportunities to improve the level of provision here would make a significant difference even if they fell below the ANGSt level.	
Binbrook	Binbrook has a number of small open spaces within the village – totalling 1.326ha. The footpath network adds a further 2.868 of looped footpaths around the village and there is another	S

	<p>footpath 948m, leading to Orford Valley LWS (9.203ha). There are no large sites above that level meeting NE standards, although there are a number of large sites (three over 100ha) that, although falling below the size threshold of NE standards, provide choice. The strategic level is met through Willingham Woods.</p>	
Bratoft	<p>Within Bratoft, greenspace is provided through the churchyard (0.264ha) and a looped walk around the eastern side of the village adding a further 0.577ha); this can be extended to walk to Burgh le Marsh (a further 2.45ha). There is an SSSI of 2.2 ha within 1 km (the SSSI is Trust Reserve and has public access) along with two LWS of 1.7 and 2.7ha within 2km, the larger of which has access. At a medium level, there is a cluster of sites that collectively meet standards, but there is currently no public access to them (Welton Woods). The strategic level is met through Gibraltar point and Wash Estuary. There are also a few other much smaller sites within 10km to which there is public access but it is unlikely that people from Bratoft would use these routinely.</p>	S
Brinkhill	<p>The church in Brinkhill and the Protected Road Verge provide 1.013ha of greenspace and the two looped walks to Driby add a further 4.05ha, one of which leads to Furze Closes LWS (23.016ha – 1.35km away), this meets the local level. There are three other Local Wildlife Sites of between 4.8 and 9.49 ha but these do not currently have but add to opportunities for biodiversity. NE standards at the medium and strategic levels are not met. However, there are some larger sites within 10km, including two clusters of sites which total 194ha and 212ha but the first of these has no public access and the second has very limited access.</p>	L F
Bucknall	<p>There is a good level of open space around Bucknall. The church (0.3ha) and the children's play area are the only spaces within 300m of the village but the footpath network adds a further 3.05ha of predominantly off road space. At a local level, there are five sites that</p>	LM F

	<p>meet the size criteria; one of these being well in excess of the size required. Three of these sites are part of a larger cluster of sites totalling 172.34ha and therefore also capable of meeting the medium scale of provision. All are accessible. At a medium scale there are two accessible sites meeting the criteria, one of which is part of a much larger cluster totalling 339.686ha (Chambers Wood). There are also two further sites (33 and 75ha) which are accessible. There are no strategic level sites (500ha within 10km) but there are four sites over 100ha (Great West Wood, Highall Wood, Ostlers and Kirkby Moor Plantations, Sotby Wood) which are publically accessible within 10km. The public footpath network in the area also allows for a number of predominantly off road routes.</p>	
Burgh le Marsh	<p>At a community level, there is GI to NE standards for approx 21% of the population through Hawthorne Fishing Lakes and Marsh Lane Football Field. However, these do not have unrestricted public access, the fishing lakes requiring payment and the football field being gated with a sign saying Private land, however, they do provide opportunities for outdoor recreation. There are a number of smaller recreation and other open spaces in Burgh that add to GI provision and can bring with them benefits for biodiversity. There is room for enhancing provision where opportunity allows and future development could help to address some of the smaller more localised deficit. There are no sites meeting the local scale or medium scale of provision but there is accessible natural and semi-natural greenspace at a strategic level provided by Gibraltar Point and the Wash.</p>	S
Burgh on Bain	<p>Within the village is the churchyard (0.24ha) and there are a couple of footpaths leading out of the village. Although there are no circular routes, one of them leads to the site Biscathorpe Medieval Village (12.96ha – 1.31km away), which currently has stewardship</p>	S

	<p>open access. At a medium scale there are no sites within the 5km large enough to meet the 100ha criteria. There is a cluster of 60.982ha of which 48.97ha has public footpath access, there are also some smaller sites with public access. Strategic level of provision is met by Willingham Woods.</p>	
Burwell	<p>There is a site capable of meeting NE provision (Brook Farm Grassland) at a community level but there is no formal access to it. Within the village is the churchyard (0.39ha) and the surrounding footpath network (although not circular), adds a further 4.55ha. There are a number of sites within 2 km of the village of that also contribute the wealth of natural and semi-natural greenspace sites around Burwell. Within 5km is a cluster of sites the largest of which (Burwell Wood) is 119 ha and totals an area of over 209 ha. Two footpaths lead from the village to parts of this cluster but very little of this is accessible and the public footpaths largely go around the perimeter of the woods but not within. However, this is able to cover the local and medium standard as well should access be improved. There are no sites meeting the higher NE level standards.</p>	LM F
Candlesby	<p>Within the village there is the churchyard and a small area of amenity open space, totalling 0.335ha. Candlesby Hill Quarry SSSI Trust Reserve (1.836ha) is within 1km of the village and although too distant or too small to meet the NE standards, it is a local asset. There is a site meeting the NE size standard at a local level and it is large enough to meet the medium standard (Welton Low Wood, which is also part of a larger cluster of other sites), however, this is not publicly accessible. There are also two smaller sites within 2km of the village of 2ha and 9ha, although only the 2ha site is formally accessible, being a Lincolnshire Wildlife Trust Reserve. There are also a few smaller sites within the 2km radius that do not meet the NE standards that also contribute the local natural and</p>	

	<p>semi-natural greenspace sites around Candlesby but again, these are not formally accessible to the public. At the medium scale, there are no sites meeting the standards although Hoplands Wood (23.565ha) is within the 5km and does provide an accessible greenspace at a smaller scale. There are no sites meeting the strategic NE level standards.</p>	
Chapel St Leonards	<p>At a community level accessibility varies across Chapel St Leonards. There are 47ha of open space within Chapel. The majority of Chapel is within 300m of some form of open space, although some of these are small pockets of open space or not freely available. The eastern half of the village is within 300m of the beach, which can meet the strategic level of GI. The northern end of the village, approx 5% of the population, also has access to Wolla Bank SSSI. 40% are within 300m of Sea Road Playing Fields. Any opportunities to improve local pockets of GI within Chapel would improve the ability to meet the standards. There are a number of fishing lakes around Chapel St Leonards, but these are not freely available for informal public use. The NE standards are met at a local level through Wolla Bank SSSI. The Beach also meets the local level for the rest of the village and covers the medium and strategic scales too. There are few sites of any significant size within any of the categories. The largest sites site with the 10km threshold is the cluster around Welton High and Low Woods which is 195ha but has no formal public access. The largest site with public access is Hoplands Wood (23.565ha) which is a Trust Reserve but falls well below the size threshold at that distance.</p>	LMS
Coningsby/Tattershall	<p>There is good coverage around Coningsby/Tattershall. There is over 150ha of open space and the majority of the population is within 300m of a piece of open space, even if it is small. At a community level, The Pingle meets standards for approx 28% of</p>	CLM

	<p>Coningsby's population (17% of Coningsby/Tattershall combined), 16% of Tattershall's population (6.5 of the combined) are within 300m of Tattershall Carrs SSSI, 25% of the combined population are within 300m of The Ings LWS, 23% of Tattershall's population (9% of the combined population) are within 300m of Castle Leisure, Tattershall LWS. Overall, 64.2% of the population is within 300m of some form of green infrastructure of 2ha or more. At a more community level, there are also numerous small amenity spaces and sports areas within and around the town that, while not providing structural natural and semi-natural greenspace, add to the Green Infrastructure. 26.6% of the combined population are within 300m of the sport facilities at either the school or Allen Barker Sports Area. The short fall of community space is in the North West corner of Tattershall and the Eastern part of Coningsby. Opportunities to improve provision in these areas should be sought through the LDF. Three of these sites (Tattershall Carrs, The Ings and Castle Leisure) are also large enough to meet the local level of provision. There are four other sites which also meet the local standards, although only one of these (Kirkby on Bain Pits Local Wildlife Site), has formal public access. At a Medium scale, Castle Leisure is also large enough to meet the Medium level, as is Ostler's Plantation (and adjacent Kirkby Moor Trust Reserve) in Woodhall Spa. There are number of other woods in the area that are large enough to meet the medium standards but have no formal public access. Only the strategic level is absent.</p>	
Conisholme	<p>There is just one greenspace site in Conisholme, the churchyard (0.4ha). The footpath network is also limited, adding a further 1.38ha although these are not circular to linked footpaths. Opportunities to improve this through development will be limited. North Somercotes Playing Field is within 2km</p>	MS

	<p>but this is a long way for youngsters to travel, on a busy road, for informal play. There is provision at a medium level with two large accessible sites available within 5km (Covenham Reservoir and the North Lincolnshire Coast NNR) both of which offer scope for informal recreation. The North Lincolnshire Coast NNR also meets Natural England's strategic level standard.</p>	
Covenhams	<p>There are two small greenspaces within Covenham, the two churchyards (0.175ha and 0.72ha), although the footpaths around the village – one to the east and another longer looped walk to the west, which can be added together – add a further 2.11ha to the supply. Covenham Reservoir adds local scale provision and is also large enough to meet the medium standard. The North Lincolnshire Coast NNR provides the strategic level of NE standards. Some of the footpaths around Covenham allow for looped walks but these will require some walking on local roads.</p>	LMS
Croft	<p>There is some GI totalling 6.43ha in Croft. Although the churchyard (0.795ha) and the War Memorial Playing Fields (0.3ha) are both smaller than the 2ha ANGST criteria, there is a site to the south of the village (Sanderson's Meadow) which is 5.334h and has public access until September 2014 and is within 300m of over half of the village. Public footpaths in the immediate vicinity of the village can add a further 2.52ha, which can extend further into the neighbouring Parishes. There no local scale provision in and around Croft. The Wash provides Strategic provision for the village and medium provision for the southern part of the Parish. Opportunities to significantly enhance local provision through development may be limited.</p>	CMS
Croft Bank	<p>The only greenspace within 300m of the village is a permissive footpath that has been introduced which is 2.87km (1.4ha). The nearest space of any size is Wainfleet Road Playing Fields (7.7ha) which is 1.75km away. There is no local</p>	MS

	scale provision in Croft Bank although medium and strategic provision is available in The Wash. Opportunities to enhance local provision through development may be limited.	
Cumberworth	The church is the only green space in the village (0.19ha) and the footpaths in the village add a further 0.49ha, this is below NE community standards but there are only around fifty properties in the main cluster of Cumberworth. There are two small sites within 2km of 3.3 and 7.6 ha, which could add to provision but do not have formal public access (the smaller site does contain a public footpath but this just crosses a small corner of the field). There is a site meeting the medium size level (the cluster of sites around Welton Low and High Woods), however, this does not have formal public access. There is no strategic site. Opportunities to enhance local provision through development will be limited due to the size of Cumberworth.	
Donington on Bain	There is over 50ha of greenspace within and close to Donington on Bain. Although some spaces are too small to meet the community standards for the village, (between 0.2 and 0.7ha), Benniworth House Farm LWS, Ivy House Farm, which are accessed though public rights of way, and Benniworth North Field collectively far exceed the 2ha standard for community space and form part of a wider complex of sites, totalling around 60ha. This complex of sites therefore also meets the community standard for the majority of the village and local standard for the remainder. Not all of it is accessible but 56.726ha of it is, and it links well to the village through the public footpath network. The public footpath network also adds at least 2ha additional land in the immediate vicinity of the village and joins up with a wider footpath network to enable longer walks. One of the footpaths leads to an additional LWS Biscathorpe Park and Fish Pond LWS (8.371ha). There is no medium scale provision but the strategic standard is	CLS F

	met by Willingham Woods.	
East Barkwith	There is around 1ha of greenspace in East Barkwith although no individual piece meets community level of provision, the churchyard and triangular park common land being below the size criteria. Public Footpaths also add just under a hectare. There are also no publically accessible sites at a local level. There is provision at a medium scale via Sotby Wood and Willingham Woods provides the strategic level.	MS
East Keal	Although sites in and around East Keal fall below Natural England size thresholds, that does not mean there is no supply of greenspace for the village. Within East Keal itself, there is only the Churchyard (0.49ha), however the extensive footpath network in the area adds in excess of 3ha and can form a number and variety of routes, many of which can be combined to form circular routes. Toynton All Saints Pitts (1.031ha) and Keal Carr SSSI (10.94ha) are within 1km and are accessible, predominantly by public footpaths. At a local scale, within 2km of the village, there are three sites although below ANGST size criteria of 3.7, 2.2 and 12 ha, the largest of which (Keal Carr Trust Reserve) has formal public access, a public footpath runs along part of the boundary of the smallest site but not within it. There are no sites meeting the medium scale of provision, although there is a good range of smaller sites a number of which are publicly accessible, from sport facilities in Spilsby to wildlife sites including Sow Dales Trust Reserves (which total 31ha). There are no strategic scale sites in this part of the District.	F
East Kirkby	The only green space within East Kirkby is the churchyard (0.394ha), local footpaths add a further 1.26ha although require use of local roads to form a circular route. At a medium level there is an SNCI and Trust Reserve at Sow Dale within 5km of totalling 31ha which is accessible but falls somewhat short of the 100ha required. There are no strategic level sites (500ha) in this part	

	of the district and although there two woodlands within 10km which are over 100ha neither have formal public access.	
Eastville/New Leake	There is 1ha of open space in Eastville provided on two sites, the playing field and the allotments; below community scale provision. There are also no accessible sites available of the required size at local or medium scale, indeed there are few sites available in this part of the district. There may be opportunities to improve natural and semi-natural greenspace through development, but these are unlikely to be at a level to meet NE standards. The strategic level is met through The Wash.	S
Edlington	Edlington is a very small community and the only greenspace within the village is the churchyard (0.24ha), which falls well below the 2has required, however, the public footpaths which extend to Thimbleby, and provide a predominantly off road circular route, add a further 1.98ha. At a local level Ashby Park is of a sufficient size to meet the standards but there is no formal public access to the site, e.g. via public rights of way, for those not using the facilities. At a medium scale, there are a number of small accessible sites but none close to the 100ha required to meet the standards and given their size it is unlikely that they are enough to tempt people from Edlington to travel to access them. There is no strategic level GI, although there are a number of areas of close to or over 100ha (though not close to the 500ha required by ANGST) that are a good recreational resources for people wanting a day out, such as Snipe Dales (87ha), Chambers Wood cluster of sites (190ha) and the cluster around New Park Wood; the latter two are part of the Bardney Limewoods.	
Firsby	Firsby has a low supply of accessible natural and semi-natural greenspace Within the village there is no GI, with the exception of the churchyard (0.26ha), the footpaths add a further 0.81ha. At a local and medium scale	

	<p>there are many small sites, some of which have formal public access, but they fall well below the size required to meet the ANGST. The only site of any significance is the cluster of sites around Welton Low and High Woods (which is 195ha and within 10km) but this has no formal public access. The strategic level can be met via the Wash, but only for the southern part of the village, not Station Road. Opportunities to improve this situation through development may be limited.</p>	
Fotherby	<p>Open space in Fotherby is provided by the churchyard, old cemetery and the allotments, these total 3.735ha but no individual space is over the 2ha of Natural England standards. Yalta Wood - a Woodland Trust site with public access (3ha) is also a valuable local resource, but this is only within 300m of the cluster of houses on Louth Road and is 1km from the northernmost part of Fotherby. There is also a good public footpath network that allows predominantly off road circular walks round the village. At a local level, there is currently a site that meets the criteria, Brackenborough Hall, although access to this site is only guaranteed until September 2012. The NE standards for natural and semi-natural greenspace are met at a medium level here through Covenham Reservoir. Away from that site, there are no sites of sufficient size. There are no strategic sites.</p>	LM F
Friskney Eaudyke	<p>NE standards are met at a strategic level through the Wash, but not at a community, local or medium level. There is a site with good public access within 1.5km of the village of 6ha (Decoy Wood) giving some local provision and there are recreation facilities in the main part of the village which are within 2km but smaller than the 20ha required. At a medium scale there are a number of small sites with public access but these fall well below the 100ha required at this scale.</p>	S
Friskney Fold Hill	<p>NE standards are met at a strategic level but not at below that level.</p>	S

	Friskney's recreation spaces are within 300m of the village and total 2.82ha, although no individual site is over 2ha; footpaths add a further 0.55ha. At a medium scale, there are no sites close to the size requirements of 100ha, with Decoy at 6ha being the largest accessible space within 5km.	
Friskney Village	The sports fields provide good community facilities and open spaces in the village total 3.41ha, but no individual site is over the size level of 2ha required by NE standards. Footpaths add a further 0.4ha. Decoy Wood (6ha) is within 2km of the village but again this falls below the required size threshold (20ha within 2km). Similarly, there are no sites large enough to meet the Medium scale. At a strategic level there is provision through the Wash. There may be opportunities to improve natural and semi-natural greenspace through development, but these are unlikely to be at a level to meet NE standards.	S
Frithville	The churchyard and the recreation ground are the only GI within the village. These add 0.682ha of green space although they fall below the size criteria for community level. The drain through the centre of the village is not publically accessible but public highways run along each bank and this adds a further 5ha of open space in the village. At a local level (within 2km) there are no GI sites. At a medium level (5km) there are a few sites with public access but these again fall well below the size criteria of 100ha, the largest sites being 8.8ha, 11.45ha and 21.488ha. The Wash is a significant site and would provide a strategic level of GI but is falls just outside the 10km range.	
Fulletby	Within Fulletby, the only greenspace is the churchyard. Recent Permissive Footpaths in the area (access until 2019) have added new opportunities and there are other footpaths in the area that add a further 2.82ha, one leading the Salmonby lakes LWS 1.56km away. There is a small Local Wildlife Site (Fulletby/ West Ashby Road	

	<p>Verges – 1.534ha) within 1 km of the village, which has public access but this again falls below the size threshold. At a local scale there are two small sites within 2km of 1.3ha and 7.7ha which have publically accessible but again too small to meet the criteria. At a medium level there are a few small sites with public access but the largest of these (Flinthill Farm cluster) is only 29ha, well below the 100ha required within 5km. Snipedales Trust Reserve lies just outside the 5km threshold but again is below the 100ha required. There is no strategic level provision in this part of the District. Within the 10km range there is one site of 212ha (Burwell Wood cluster), however, very little of this is accessible and much of the access is by public footpaths around the perimeter of the woods but not within.</p>	
Fulstow	<p>Fulstow has a good level of green infrastructure, meeting all the NE standards. At a community level, the recreation site within the village is over 2ha and covers the majority of the village, the churchyard and local footpaths also add provision. At a local level, within the 2km Covenham Reservoir, at 115ha, more than meets the criteria and also meets the medium standards. There are also two small local sites of 2.19ha and 4.54ha although these do not have formal public access. The North Lincolnshire Coast NNR meets the strategic level. The Public footpaths around the village provide a 2km (1.25 miles) round village walk, predominantly off road, to the east of the village.</p>	CLMS F
Gayton le Marsh	<p>There are no sites meeting the community or local ANGSt criteria, indeed there is no GI at all within a 300m and 2km radius of the village. There is also no medium provision serving Gayton le Marsh and any sites within the 5km threshold are either very small or have no public access. There is, however, strategic provision is available along the coast. Opportunities to enhance local provision through development will be limited.</p>	S

Gipsey Bridge	<p>There is a poor level of green infrastructure in Gipsey Bridge, with no sites available and no public footpaths. There is only the school playing field within the village, which does not have open access and there is no GI at all within 2km. At a medium scale there is the Witham Way but this falls below the size threshold. There is no strategic scale GI in this part of the District, the largest sites within 10km being Castle Leisure Park at Coningsby which is just short of 110ha. If there are any opportunities to improve GI these will be on a small scale and unlikely to be at a level to meet NE standards.</p>	
Goulceby	<p>Goulceby has five sites able to meet the community standards, ranging between 2.5 and 14.32ha, all have access, although one of these is through a permissive footpath. Three of the sites form a larger cluster of 23.45ha. Together, these five sites supply just under half of the properties in the village. There is a very good network of public footpaths around the village, providing access to the above sites and providing a further 1.793ha of open space in their own right. These also lead to a further 20.142ha of Local Wildlife Sites and a Local Nature Reserve. At a local level, there are three sites of 3.4 to 23.65ha within 2km, the latter is formed from a cluster of three sites and is the only one to have formal public access through the public rights of way network. At a medium level there are no sites meeting the standard although there is a cluster of sites (at Benniworth) that total 61ha and have a good degree of public access. There are no sites available at a strategic level.</p>	CL F
Grainthorpe	<p>Community greenspace in Grainthorpe totals 11.653ha with the Sport and Recreation area comprising the single largest site. The village does not meet the local NE standards, although there are two sites within 1km of 2ha and 2.3ha and a further two sites within the 2km radius of 1.7 and 9.7 ha, which are accessible. In addition there is a lot of common land around Grainthorpe.</p>	CMS

	There are two sites that meet the medium level provision and one of these (the North Lincolnshire Coast NNR) is large enough to meet the strategic level of provision as well.	
Great Carlton	There are no sites meeting NE community, local or medium standards, although there are two smaller sites (0.311, 0.65 - the two church yards) within 1km, a small site (0.47- Manby Churchyard) within 2km and some good permissive access in the area. There area also a number of predominantly off road looped walks around the village via the public footpath network. There will be few opportunities to improve this situation through development. There is strategic level provision of NE standards along the coast.	S F
Great Steeping	The only GI site serving Great Steeping is the public footpath that goes to Little Steeping and no larger sites to meet the NE standards at a local or strategic level. There will be few opportunities to improve this situation locally through development. There is a collection of sites sufficient to meet the medium level of provision (Welton Woods cluster); however, there is no formal access to these sites.	
Great Sturton	Great Sturton has no community level of provision; however, it is a very small community. It does have a site at a local level (Sotby Wood) which at 116ha is capable of meeting both the local and medium level of provision. There is also a smaller site, (Sotby Meadow) which is an SSSI and a Trust Reserve and although at 6.1ha is not capable of meeting local standards but adds to local provision. There is also another accessible site which is capable of meeting the medium level standards (Chambers Plantation) which is part of a larger group of accessible sites that provide over 340ha of accessible natural and semi-natural greenspace. There is no site at a strategic level.	LM
Greetham	Greetham has a site of community NE standard size but this is not formally accessible by the public, the churchyard	

	(0.318ha) and the village pond providing the only areas of green space (0.059ha). There are also a number of small sites within 2km of the village but these are below NE standards and are not formally accessible, however, they add to biodiversity provision in the area. There is no availability at a local, medium or strategic level.	
Grimoldby/Manby	Grimoldby and Manby have 3.859ha of greenspace between them, although none of the individual sites is over the 2ha NE standards and not all spaces are with 300m of all residents. Footpaths add a further 2ha of open space. There are no local sites meeting the standards or at a medium level. There is provision available at a strategic level along the coast. There may be opportunities to improve the level of provision at a local level, although whether this could reach NE standards will depend on the opportunities available.	S
Hagworthingham	Hagworthingham has a total of 5.25ha of open space accessible to it, although only 16.5% of the population are within the 300m. There is also a good public footpath network around the village offering a variety of, predominantly off road, short circular routes, which adds in excess of 2.5ha and two of these footpaths lead to larger publically accessible site. There is good provision around Hagworthingham with two sites meeting the local NE standard, one of 31ha and one of 81ha (just short of the medium standard), both of which are Trust Reserves. There is no provision at the medium and strategic level.	L F
Halham	The only greenspace within Halham is the churchyard (0.19ha) but the public footpath network adds a further 1.899ha At a local level with four sites meeting NE standard, although only two are publicly accessible. The two sites that are NOT accessible would be large enough to meet the medium standard. There is a small site of 2.4ha within 1km, although not accessible and two sites of 4.859ha and 9.496ha within 2km which are also not accessible but add to biodiversity opportunities. There	LM

	are three sites large enough to meet the medium standard, one of which is publicly accessible. Within the 5km catchment there are a further 21 sites, some of these are very small but there are 13 sites over 10ha and five sites over 50ha two of, however only nine of these are formally accessible. However, there are no strategic level sites.	
Halton Fenside	No sites meet the NE standards at Halton Fenside, although the local footpaths provide 1.509ha. There are unlikely to be opportunities to significantly improve the level of availability through development.	F
Halton Hologate	The churchyard (0.747ha) provides open space within Halton Hologate, along with a footpath within the village (0.22ha); this is below NE levels. Additional longer linear footpaths routes add a further 0.75ha. There are unlikely to be opportunities to significantly improve this through development.	
Hameringham	Hameringham is a very small village, church yard (0.223ha) provides the open space in the village. Footpaths add a further 0.9ha. there is 1.2ha of common land, although this is 0.59km away from the main part of the village, by public footpath link. At a local level, provision is provided through Snipe Dales Trust Reserve. There is no higher-level provision for the village. There is a site of approx 15ha within 2km, which does not have access and is below NE standards but adds to biodiversity in the area. There are a number of public footpaths, including one linking to Snipe Dales, but these are linear in nature and do not provide a circular route.	L F
Hatton	At a community level, Hatton only has the churchyard (0.156ha) and a public footpath (0.34ha). There is a link via the public footpath and a permissive route (until Feb 2020) to Sotby Wood LWS (116.726ha) 0.72km away. Hatton is well provided at a local level with three sites reaching the standard individually, two of which are also large enough to meet the medium level and all are accessible. Two of the sites area	LM

	<p>also part of a larger accessible cluster of over 340ha (Chambers Woods), all of which falls within 5km of Hatton. The Cluster of sites at Austacre Woods, also part of the Bardney Limewoods, also meets the medium level. There area also eight other sites within the 5km between 2ha and 78ha (College Woods), three of these (7.549ha, 10.148ha and 78.819ha are accessible). There are no strategic level sites.</p>	
Hawthorne Hill	<p>Castle Leisure is capable of meeting the size criteria at both the local and medium NE standards and is accessible via a public right of way. There are no community sites within Hawthorne Hill or strategic level sites in this part of the district.</p>	LM
Hemingby	<p>There is a site close to Hemingby, which is large enough to meet the community level but this has not yet been surveyed under the recent survey of Local Wildlife Sites, and anyway is not accessible. There is a site large enough to meet the local standard, Ashby Park, but this has not formal public access except for those using the facilities of the park i.e. public footpaths. At a medium NE standards are met by Sotby Wood and there is also a further cluster of sites of 28.71ha of which 25.91ha are accessible which though below the NE standard, supplement natural and semi-natural greenspace in the area. There are no strategic sites.</p>	M
High Toynton	<p>Greenspace in High Toynton is provided by the churchyard (0.341ha). There are two small sites of 1 and 4.248ha within 1km of the village the latter of which has a public footpath passing through it. There is also a larger publicly accessible site at Snipe Dales (Trust Reserve and SSSI) within 5km, which at 87ha, is only just short of the NE standard of 100ha and a number of other smaller sites within 5km that fall well below the NE threshold.</p>	
Hogsthorpe	<p>Hogsthorpe has 2.067ha of greenspace, although neither site is large enough to meet the NE standards. Footpaths add a further 1.05ha. There are no sites that</p>	MS

	meet the NE standards local scale. At a medium scale the beach is within 5km of the whole of the village. Gibraltar Point is only just over to 10km threshold, but the Beach provides a continuous accessible natural space.	
Holton le Clay	Holton le Clay has a total of 7.088ha of sites at a Community level, footpaths in and around the village add a further 2.23ha. The standards for natural and semi-natural greenspace at a medium and a strategic level as the coast is within 5km and is large enough to meet the standards for the medium and strategic level of provision. Also within 5km are Cleethorpes Country Park and Tetney Golf Course (which has a public footpath through it), these are not large enough to meet medium standard but add to provision locally, as does Tetney Blow Wells SSSI and Trust Reserve (15ha). There may be opportunities to increase community provision in the future.	MS
Horncastle	Horncastle has a total of 39.464ha of green space, although not all are large enough to meet NE size thresholds, with footpaths adding a further 3.712ha. However, these sites only cover 73% of the town with gaps being mainly on the eastern side. There is still progress to be made at a community level through any growth in the town. At a local level, there is a site large enough to meet the local standard, Ashby Park, but this has not formal public access except for those using the facilities of the park i.e. public footpaths. Medium level is provided by Highall Wood at Woodhall Spa. There a number of other smaller sites within 5km (4.5 – 38.5ha), although only one of these (Forestry Commission land at Woodhall Spa - 38.5ha) is accessible. There is no provision at a strategic level in this part of the district.	CM
Horsington	The only greenspace in Horsington is the churchyard, although footpaths add a further 1.68ha, this falls below 2ha community level provision, although there is a site of 85ha (Horsington and Stixwould Woods) 0.83km away which	LM

	adds significantly to provision for the village. NE criteria are met at a local and medium level through a number of accessible woodlands in that area, including Horsington and Stixwould Woods. One site meets the medium level on its own, with a further cluster of smaller sites being able to meet the criteria. There are no sites at a strategic level in this part of the district.	
Hundleby	Although Hundleby does not have any sites which individually meet the NE standards at a community level, the sites together come to 2.664ha. There is also a good network of local footpaths, adding in excess of 3.49ha. One of the footpaths provides access to Keal Carr, which provides a further 10.94ha. At a local level, there are three areas within the 2km radius, between 4 and 14.5ha, although only one of these 11.9ha is formally accessible and is accessible to the village via the public footpath network. These fall below the required size for NE standards but add to local provision. There is no site falling within the medium standards, although Snipe Dale Trust Reserve is within 5km and at 87ha, only just falls short of the standards. There are no sites at a strategic level in this part of the district.	F
Huttoft	The public playing field at Huttoft meets the NE standards and public footpaths add further to provision. The beach is within 5km and provides a medium standard of provision and there is accessible greenspace at a strategic level, also through the beach and coastal habitats. A greater variety of sites would be a valuable contribution, and the work of the Coastal Country Park in this part of the District may help to address this.	CMS
Ingoldmells	Ingoldmells has 6ha of open space, with footpaths adding a further ha. The beach is within the 2km radius for NE standards and therefore the continuing swathe of habitat along the coast meets the standards across the board. However, opportunities to add to the variety of habitats should be considered. Again, the work of the Coastal Country	CLMS

	Park in this part of the District may help to address this.	
Irby in the Marsh	At a community level there is 3.9ha as a new area of permissive access had been created of 3.5ha which is a good local facility. Access is guaranteed until 2018. There is no natural or semi-natural greenspace at a local or medium scale. There will be few opportunities to improve this situation through development. However, there is provision at a strategic level through The Wash.	CS
Kirkby on Bain	Kirkby on Bain has a site at that meets the size for community level, Reddings Wood, but there are no public footpaths running through the site. The church provides 0.65ha of open space and there are some good footpaths links around the village adding 3.54ha. At a local level there are nine suitably sized sites, seven of which are accessible. Two of these sites also meet the medium standard, although only one is accessible. There are two other sites within 5km that meet the medium level, but only one of these is accessible and there are a number of other sites within this radius that are not large enough to meet NE levels but add to biodiversity in the area, although many of these are not accessible . There are no sites at a strategic level in this part of the district.	LM
Langrick	There are two distinct clusters of dwellings at Langrick but natural and semi-natural greenspace is limited within and immediately both. There is a public footpath along the length of the river, on the opposite bank, reached by a bridge, which is within 300m of the cluster near the bridge. There are no sites at a strategic level in this part of the district.	F
Legbourne	Legbourne has a total of 5.05ha of greenspace within the village, although no single site is of the NE 2ha standard. There is also a good public footpath network around the village, including a circular walk predominantly off road, and these add a further 2.43ha and lead to over 95ha of natural and semi-	LM F

	<p>natural greenspace. Four sites meet NE local size standards and three of these are formally accessible to the public; one of the sites is also part of a larger cluster that also meets NE medium standards but the formal access to this cluster is very poor. At a medium scale, there are also a site of 78ha (Tothill Wood - falling just below the standard of NE) but this is not accessible. There are also a few very small sites within 5km but only one of these (Muckton Wood) is formally accessible to the public. There are no sites at a strategic level in this part of the district.</p>	
Little Carlton	<p>There are no sites meeting NE community, local or medium standards. However, there are a number of predominantly off road looped walks around the village via the public footpath network and a series of permissive footpaths which provide a good local resource. There will be few opportunities to improve this situation through development. There is strategic level provision of NE standards along the coast.</p>	S F
Little Cawthorpe	<p>Open space within Little Cawthorpe totals 1.67ha and footpaths increase this to 3.16ha. Kenwick Golf Course is just within 300m of part of Little Cawthorpe and although this is a membership club, it does have public footpaths crossing the site so is able to be enjoyed by the wider community and includes a small Local Wildlife Site. There is also a good public footpath network around the village which leads to a few other natural and semi-natural greenspaces. The village has a three sites of a size to meet the local NE standards, however, only two of these are formally accessible by the public, one of the sites is part of a larger cluster which is also capable of meeting medium scale of provision but has a very low level of access. There are also two smaller sites within 1km of the village failing to meet NE levels but add to biodiversity in the area. There are no sites at a strategic level in this part of the district.</p>	CLM F

Little Steeping	There is a low level of provision around Little Steeping; with no sites meeting the NE standards. The churchyard provides the only space within the village (0.322ha) and footpaths add a further 1.11ha.	
Louth	Louth has 105.58ha of open space, although few of these are large enough spaces to meet NE size standards, some are schools and other spaces which do not have open public access and there are fewer spaces in the north eastern part of the town. At community level, approx 57% of the town has access to a suitable sized area of greenspace, however, if the sports facilities are removed from this calculation, approx 14%% of the town has community level access to sites that meet NE definition of natural green space. The northern and eastern parts of Louth are particularly lacking in access, although there are smaller pockets not meeting NE size levels that help add to facilities. These areas of provision can be looked at through the settlement proposals of the LDF. There are no sites available to meet any of the higher standards. Louth does however have a good supply of sites of a smaller size, small pockets within the community and recreation opportunities, and some valuable larger open spaces such as Hubbard's Hills and Westgate Fields, the Golf Course also has a footpath running through part of it.	F
Low Toynton	Low Toynton is a very small community, the churchyard (0.2ha) providing its only open space, a recent permissive footpath and formal Public Right of Way add a further 1.44ha.	
Ludborough	Ludborough is able to meet the NE natural and semi-natural greenspace criteria at the medium level (Covenham Reservoir) and strategic level (the North Lincolnshire Coast NNR) but not at the community or local ones. Autby Wood (10ha) has public access, but is just outside the 2km distance. Within the village the churchyard (0.256ha) is the largest space.	MS

Ludford	Ludford has 2.401ha of open space, although no individual site reaches the 2ha community level of NE standards, the playing field falls just short of the being 1.77ha. There is also no local level of provision, although there are a few smaller sites surrounding the village that fall short of the local standards and are not accessible. Willingham Woods is approx 5km away and meets both the medium and strategic level of provision.	MS
Mablethorpe/ Trusthorpe/ Sutton	There is 1,073ha of open space within or on the edge of Mablethorpe/Trusthorpe/Sutton on Sea; not counting the beach. However, the majority of this is on the northern edge of Mablethorpe (974ha) leaving just under 100ha in and around the remainder. At a community level, there is provision for approx 64% of the population if the beach is included in the figures, if not then the percentage drops to 50%. NE standards are met in all categories in this area, with the Theddlethorpe Dunes providing access at both the local and medium scale. There are some parts of the town that would benefit from greater access to local GI and also improving the supply at a higher scale, as all the GI comes from one source. This should be considered as part of the LDF. The work of the Coastal Country Park in this part of the District may help to address this.	CLMS
Maltby le Marsh	Maltby le Marsh has 8ha of open space in and around the village, with a further 1.9ha of footpaths. However, the Local Wildlife Site on the edge of the village has no public access. There is one site meeting the NE size standards at a local level, although this is Woodthorpe Hall Golf Course and access is limited. Saltfleetby and Theddlethorpe Dunes are on the cusp of the 5km threshold thus meeting the medium level. In addition there are three sites, of 25ha, 49 and 74ha (Swin Wood, Mother and Greenfield Woods and Tothill Wood), within the 5km medium level threshold which do not meet NE standards and have no formal access to the public but would add significantly to provision if	MS

	<p>they were.. The level of community provision would benefit from improvement; however, with the level of development likely in Maltby le Marsh, it is doubtful if this development opportunities would bring forward sites of a large enough size to meet NE standards but would supplement local provision.</p>	
Mareham le Fen	<p>Mareham le Fen has no sites meeting NE size standards at any of the levels. At a community level over 2ha in total but no individual site that meets the standard; footpaths add another hectare. Shire Wood on the edge of the village could be a local resource but has no formal public access. While it has a number of natural and semi-natural greenspace sites meeting NE's size standards at a local level, none of them are formally accessible to the public. Two of the sites within 2km are also large enough to meet the requirements at a medium level were they accessible; there are also three smaller sites of between 6.25ha and 12.2ha but again not accessible to the public. There are a further seven off between 20 and 99ha within the 5km cordon that fall just short of the NE standards but most of these are not formally accessible to the public. Unfortunately there is no site of strategic size in this part of the district.</p>	
Mareham on the Hill	<p>Mareham on the Hill is a very small village. It has one area of open space, the churchyard (0.229ha) but public footpaths add a further 2.29ha; one of these also leads to Mareham Plantation SNCI (4.248ha). There is only a site large enough to meet the NE standards at a medium level for Mareham on the Hill; but this site is not formally accessible to the public. Unfortunately there is no site of strategic size in this part of the district.</p>	
Marshchapel	<p>The individual open spaces in Marshchapel fall below the community level scale of 2ha, but cumulatively, there are 2.8ha of open space in the village and footpaths add a further 7.8ha. There are no sites meeting the NE standards at a local level in the</p>	MS

	village. The medium level of provision is met through two sites (Covenham Reservoir and the North Lincolnshire Coast NNR), the latter of which is also large enough to meet the strategic level of provision.	
Mavis Enderby	Mavis Enderby Valley SSSI is within the heart of the village, and has partial public access, the churchyard and public rights of way also offer additional accessible greenspace. At a local level of NE standards, there is Sow Dales (which is a Trust Reserve and only just falls below the medium level of provision). There is also a site within 1km of 1.6ha, which falls below NE standards but add to local provision.	CL
Midville	The only open space at Midville is the Churchyard (0.39ha) and there are no public footpaths providing access to the wider countryside. Due to the size of Midville the situation is unlikely to be improved upon through development.	
Minting	Open space in Minting is provide by the church yard, the small village green and public footpath network. There is a site providing local level of access and two at the medium level. The local site is part of a large cluster of sites (Chambers Wood), which includes one of the medium standard sites. Unfortunately, there is no site of strategic size in this part of the district.	LM
Mumby	Mumby has 1.45ha of natural and semi-natural greenspace, with footpaths adding a further 1.6 of space. There is no provision at a local level. There is an SSSI at Wolla Bank of 42.5ha but this falls below the NE standards for the distance. However, the beach is within 5km and is a good local resource. The strategic level is not met but The Wash NNR SSSI (4,185 ha) and Gibraltar Point (part of the Wash) NNR SSSI etc (625 ha), which far exceed the strategic level required by NE, only lie 3km beyond the 10km buffer of NE standards. There is a good public footpath network round the village.	M F
New Bolingbroke	There is a low level of community open space with only the churchyard and the	

	<p>small village green/play area totalling 0.35ha; footpaths add a further 1.94ha. There is no local scale provision in the area. There are a few woodland sites in the area that meet NE standards at a medium scale; however, these are not formally accessible to the public. There is also a site of 54ha (Shire Wood) within the 5km cordon but this falls below the size threshold and anyway is not publically accessible.</p>	
New York	<p>The only open space is the village is alongside the village hall (0.156ha) and there are no public footpaths to access the wider countryside. There is no local scale natural and semi-natural greenspace provision in and around the village, however, NE standards are met at a medium scale as Castle Leisure is within 5km. There is another site within 5km (St Helen's Wood) large enough to meet medium level standards but it is not publicly accessible. There are a further three sites with 5km that fall below the size standards, two of which are accessible to the public (Tattershall Carrs and The Ings at Coningsby), but which add to local provision. There are no sites the meet strategic level standards.</p>	M
North Cockerington	<p>There is no open space within North Cockerington, although public footpaths add 2.71ha of accessible space. There is also no space that meets the local level for the village. At a medium scale, there is a site meeting the criteria just over the 5km cordon (Covenham Reservoir). There are two sites that meet the strategic level (North Lincolnshire Coast NNR and Saltfleetby and Theddlethorpe Dunes). The level of development likely in North Cockerington is unlikely to be sufficient to improve this situation.</p>	S
North Cotes	<p>The playing fields and churchyard provide 1.424ha of open space in the village, public footpaths add a further 0.76ha. There is no local level of provision around North Cotes, even below NE standards. At a medium level there are two sites, Covenham Reservoir and North Lincolnshire Coast NNR, the latter of which is large enough</p>	MS

	to meet the strategic standards as well.	
North Somercotes	The playing fields reach the size standards for greenspace. The village has 7.943ha of greenspace within it, including the school playing fields and footpaths add another 3.34ha. North Somercotes Warren on the edge of the village is also a substantial area of greenspace (28.39ha) but has no formal public access. The local level of provision is achieved for approx 60% of the population from the North Lincolnshire Coast NNR, but this is outside 2km for the remainder of the population. The Medium and Strategic levels are also met through the coast.	CLMS
North Thoresby	The playing field at North Thoresby is over 2ha and the village has a total of 4.274ha, with footpaths adding a further 2.98ha. One of the footpaths leads to Autby Wood SNCI (10.074ha) 2.3km away which while falling below the NE standard, adds to local provision. However, the village does not have a local site. The medium and strategic level are provided for by Covenham Reservoir and the North Lincolnshire Coast NNR respectively. There may be possibilities to improve the green infrastructure provision at a community level through development.	CMS
Old Bolingbroke	The community and local levels of provision are well covered, with Lower Sow Dales Trust Reserve immediately adjacent to the village; it is also large enough (23.154ha) to meet both levels. Footpaths add a further 2.42ha. There is also a small site of almost 17ha within 1km, which just falls below the NE standard but is not formally accessible to the public. Snipe Dales Trust Reserve also lies within the 5km cordon but, at 87ha, it falls just below the NE standards at a medium level but is a good local resource. There is no provision at a strategic level.	CLM
Orby	Orby has two open spaces in the village, the churchyard and the adjacent pen space – totalling 0.91ha; footpaths add a further 3.89ha. There is no local scale provision, even at a scale below NE	S F

	standards. There is a site that is large enough to meet NE medium standards (Welton Woods) but this is not formally accessible to the public. There is however accessible provision at a strategic level of NE standards. There are smaller areas which add to wildlife opportunities locally but these are not publicly accessible. There is a Lincolnshire Trust Reserve (Hoplands Wood) within 5km but at 20ha, this falls well short of the 100ha required to meet NE standards. There is a good public footpath network around the village.	
Partney	Community open space in Partney is provided by the churchyard (0.21ha) with footpaths adding a further 3.92ha. Local and strategic levels are not met. There is a site the meets the NE size requirements at a medium scale for Partney (Welton Woods) but this site is not formally accessible to the public. There is also a site of 21ha approx 3km away which has permissive access although not formally accessible to the public, and a site of 10.9ha that is a Trust Reserve (Keal Carr), but these are below the size requirement of NE standards.	F
Raithby	The only open space in the village is the church yard (0.2ha). There is a site of 6.8ha (part of Mavis Enderby Valley) 770m away from the village. Although falling below the size for NE standards it adds to local opportunities and biodiversity in this area. There is also an accessible Trust Reserve of 10.94ha (Keal Carr) with 2km radius that falls short of NE local size standards but adds to provision. At a medium scale, there are a few accessible sites including Snipe Dales at 87ha, all below size thresholds but all providing local assets for people and biodiversity. There is unlikely to be much opportunity increase provision through development.	
Revesby	Revesby is a very small village and has 1.463ha of open space, comprised of the churchyard, the village green and a local footpath. Although below NE size standards, this is quite a large amount	

	<p>of open space for such a small village. Revesby has sites of the size to meet natural and semi-natural greenspace at a local and medium scale but none of these sites are formally accessible to the public. Within the 2km local buffer, there are also two additional sites of 6.4 and 12ha, which fall below the NE standards although again these are not accessible. At a Medium scale there are also two sites below the size threshold that are also not accessible but all these sites add to opportunities for biodiversity in the area. Unfortunately there is no site of strategic size in this part of the district.</p>	
Roughton Village	<p>The only open space in Roughton is the churchyard, although the footpath network adds a further 1.5ha. Local and medium scale provision is available. There are five local scale sites, although only three of them are formally accessible. One of the three local sites (Highall Wood) is also large enough to qualify at a medium level, although this is not accessible throughout. There are an additional three sites that meet the medium standards of 100ha within 5km, however only one of these is accessible Ostler's Plantation – 103ha - which with the adjacent Kirkby Moor Trust Reserve comprises an accessible site of 172ha. Below NE size standards, there are a few small sites within 1km (although these are not accessible) and a further five sites of between 4.8 and 14.6a within the 2km band, although few of these are accessible and a further seven sites within 5km of between 9 and 55ha, six of which are accessible. Although these additional sites fall below the size threshold, they add to biodiversity and, in some cases, accessible greenspace in the area. Unfortunately there is no site of strategic size in this part of the district.</p>	LM
Saleby	<p>The church yard is the only open space in Saleby (0.218ha), although footpaths add 1.055ha. It has two sites that meet the local size standards but one is not formally accessible to the public (Mother and Greenfield Woods) and the other</p>	S

	(the Woodthorpe Hall golf course) is not generally accessible to the public through public footpaths. There are no sites meeting the standards at the medium level, however, there is an accessible site at the strategic level through the coast. There are three sites within the 5km cordon that falls below the 100ha standard (at 1.5, 24.9 and 79ha) but again these do not have formal public access.	
Saltfleet	Saltfleet has good access to natural and semi-natural greenspace, with two strategic standard sites on the doorstep, so meeting the Local and Medium requirements as well,. The public footpath network also adds 4.5ha with routes stretching as far as Theddlethorpe. Below the size thresholds there are also three sites, one each in community, local and medium categories that add to biodiversity opportunities although not publically accessible. There is also a 100ha wetland at Saltfleetby that has been created with permissive access, which will add to local choice.	CLMS F
Saltfleetby	Saltfleetby has access to natural and semi-natural greenspace at a medium and strategic level, with two strategic standard sites close by but both of these are coastal habitats and so there is no variety of provision. There is also a 100ha wetland at Saltfleetby that has been created with permissive access, which will add to local choice. The Saltfleetby-Theddlethorpe Dunes SSSI also meets Local provision for 29% of the village and Medium scale provision for 83% of the population. Louth United Football Ground and the adjacent fishing lakes add to recreation provision, although not necessarily freely and publically available. The four churchyards also provide small-scale community greenspace (0.17, 0.18, 0.33 and 0.5ha) and the green lane at the south west of the village is approx 1ha. Given the linear nature of Saltfleetby, a community level site (2ha plus) on a site more central to the community should be considered.	MS

Scamblesby	Scamblesby has 1.152ha of natural and semi-natural greenspace, with footpaths providing an additional 2.06ha. Some of these footpaths lead to a further 549ha of wildlife sites. These form two clusters of sites that reach the local scale threshold (Flinthill Farm Cluster and Silverlines Meadow cluster). It is doubtful that sufficient development would come forward in Scamblesby to improve the amount of open space within the village significantly. There is no medium or strategic scale space around the village.	L
Scrub Hill	There are no open spaces within or around Scrub Hill and no public footpaths to enable access to the wider countryside. It is unlikely that there will opportunities to provide this through development. There is one site (Castle Leisure Tattershall) that is just on the cusp of the 2km Local threshold. There are two woodland sites at the medium scale, although only none of these is formally accessible to the public. There are no strategic sites in this part of the District.	L
Sibsey	There is poor provision on natural and semi-natural greenspace around Sibsey. The playing fields provide 2.2ha of greenspace, but there are very few houses within 300m. The churchyard (1.2ha) and a small area of open space (0.15ha) add some additional greenspace but below the NE standards. Therefore, there is no community provision. At a local level, there is a LWS of the appropriate size, but this is not accessible, although it does add opportunities for biodiversity. There is also no medium scale provision, although there is strategic provision through The Wash.	S
Skegness	There are sites meeting the standards for all levels at Skegness, however, the community level does not cover the whole of the town. There are a number of small areas within the town, such as sports areas, parks and gardens and small pockets of urban green space, which have some function within the realm of greenspace and help to provide	LMS

	<p>community level space although most of these do not meet the NE definition of natural greenspace, or are not large enough to meet the criterion. If the beach (north of the designated areas) is added to the areas within the town meeting the NE definition, approx 34% of the population can meet the community standard, gaps in provision being in the northwest and west of the town. With Skegness being one of the larger settlements in the district there may be opportunities to add to this community level of natural and semi-natural greenspace, and possibly the local level, in and adjacent to new development. Some of this may fall below NE standards but will add to accessible provision in areas where the level is not currently met. Gibraltar Point provides local level of provision for over 50% of the population and the Wash provides medium and strategic provision for the whole town.</p>	
Skendleby	<p>There is no community site at Skendleby, although a 20ha permissive access area has recently been created until 2016 which is a valuable local resource. There is a site that meets the local and medium scale (Welton Woods), but there is no formal public access. There is also no strategic level provision. Below NE standards, there are 4 sites within 2km of between 0.6ha and 9ha, but none of these are accessible. There are two sites within 5km that are over 20ha (one of 21.8 Langton Sheep Walks and one 23.5ha – Hoplands Wood) the larger one is a Trust Reserve and the smaller one has permissive access; there are also two smaller site with no formal access. Although they fall below NE standards they sites add to provision in the area.</p>	
Sloothby	<p>There are no sites meeting NE standards at a community or local level, although there is an LWS of 7.3ha (although it is not publicly accessible) and a local common land (also a LWS) of approx 14ha on the edge of the village, with in 1km. There is a cluster of sites (Welton Woods) which meets</p>	

	<p>the medium standards, but this is not formally accessible to the public. There are no sites of a strategic level. Below NE standards, there are three sites within 5km (2.2ha, 3.3ha and 23.5ha – Hoplands Wood) which are all accessible and help provide green infrastructure in an area where it is unlikely development is going to bring additional sites.</p>	
South Cockerington	<p>South Cockerington is poorly served by GI at a community, local level, with no sites even below NE standards and there appears little prospect of this improving through development. There is no Medium provision either, although below NE standards, there is Kenwick Park Golf Club (58ha) almost 5km distant, which does have public footpath access. There is provision at a strategic level.</p>	S
South Reston	<p>South Reston has no natural and semi-natural greenspace sites meeting community level. It does have two sites meeting the local scale of NE standards (Castle Wood and Tothill Wood) but these are not formally available to the public. There is coverage at the medium level through the Burwell Woods cluster, but this is only partially accessible. At a strategic level the Saltfleetby and Theddlethorpe Dune and the wider coast are within 10km. Below NE standards, there are two sites of 7.6ha falling 1km of the village but this is not formally accessible to the public. Within 5km there are six sites of between 11 and 60ha that also add to provision below NE standards; four of these are accessible (Muckton Wood and Trust Reserve, Legbourne Wood Trust Reserve and Maltby Wood South). There are also a number of footpaths around the village that would enable a looped walk of varying lengths predominantly off road including a newly created permissive route until 2019 which links up existing public rights of way.</p>	MS F
South Somercotes	<p>South Somercotes has medium scale provision, through North Lincolnshire Coast NNR and Saltfleetby Theddlethorpe Dunes, the latter of which is also at a scale and distance</p>	MS

	<p>large enough the meet strategic provision. However, there is no community or local scale provision. There are a number of smaller sites (mainly playing fields or fishing lakes) within 5km of the village, these falling below NE standards but two are of biodiversity importance adding to local provision.</p>	
South Thoresby	<p>South Thoresby has sites to meet all the NE standards apart from strategic. At a community level, the cluster at Calceby Marsh meets the standards. Within 2km, there are two additional accessible sites of 12.4ha and 15.15ha (South Thoresby Warren and Rigsby Wood Trust Reserve), and within 5km as well as numerous smaller sites, with five of these being accessible (between 5.9 and 23ha) although these fall short of NE standards they help biodiversity and recreation opportunities for the village.</p>	CLM
South Willingham	<p>There are no community scale sites at South Willingham. There are three sites capable of meeting local NE standards here, as well as a number of smaller sites within 1km of the village, but none of them are formally accessible to the public. There is medium level provision via Sotby Wood, and in addition to this site, there are several other smaller sites and clusters of sites, some of which are accessible to the public, which add to biodiversity and recreation opportunities. Strategic provision is provided by Willingham Woods.</p>	MS
Spilsby	<p>Spilsby has a very low level of natural and semi-natural green infrastructure for a town, there being no sites meeting NE standards and few pockets of natural and semi-natural greenspace within the town itself. At a community level, there are sites (all sport and recreation sites) providing accessible greenspace to approx 57% of the population, however, if the school site is removed from this, the figure drops to 33%, but these are managed predominantly for sport and recreation. There are four small sites within the 2km but the largest of these, by some way, is 10.9ha – this latter site, Keal Carr, is the only one that is</p>	

	<p>formally accessible by the public – falling well short of the 20ha required. On a medium scale, there are 2 accessible sites over 20ha within 5km, and a number of smaller sites but most of these are not formally accessible to the public. As a town, Spilsby should be served by more natural and semi-natural greenspace than it is. There may be opportunities to provide improvements at a community and local level through the LDF, but they may still not meet NE standards, however, beyond this, it is unlikely that levels will improve significantly without outside involvement. However, there is a very good public footpath network providing a number of looped walks around the town.</p>	
Stickford	<p>There are no sites in or around Stickford meeting the NE standards and no sites very close to the village falling below that level. There is a small site within 2km of the village (Stickney Picnic Area) which is accessible, although it is only 2.5ha. With 5km, there are three sites of 2.2ha; 10.94ha and 23.6ha the largest two of which are accessible (Lower Sow Dale and Keal Carr Trust Reserves) . There is no site meeting NE strategic standards.</p>	
Stickney	<p>There are two sites meeting NE size standards at a community level in or around Stickney (the picnic area and the school playing field along with the playing field provides GI for 61% of the village, however, if the school is removed from this, this falls to 14%. There is no provision at the local or medium scale or NE strategic standards. The public footpath network provides a 2 Km (1.25mile) walk looped walk to the east of Stickney.</p>	F
Stixwold	<p>Stixwold is well provided at a local and medium scale of NE standards, with a number of woodlands more than meeting the requirements. There are also a number of sites falling below that size threshold at a medium level that are accessible. However, there are no sites that meet the community level. Unfortunately there is no site of</p>	LM

	strategic size in this part of the district.	
Strubby	There are no sites at a community or local level in or around Strubby and this situation is unlikely to be improved through development. There are three recreation facilities within 2km, but these are not natural greenspace and are not freely accessible. NE standards are also not met at a medium level, although there are four woodland sites within 5km of 5, 25, 48 and 79ha but only one of these sites are formally accessible to the public. The strategic level of provision is met.	S
Swaby	NE standards are met at a community, local and medium level in and around Swaby, although at a community level the site (Swaby Valley cluster), is only within 300m 37% of the households in the village due to its spread out character. There are also five other small sites within 2km, one of which is accessible and fifteen sites between 2 and 5km below NE size standards although only four of these are formally accessible to the public. There is no site of strategic size in this part of the district. It is unlikely that provision will be increased to NE standard through development.	CLM
Tathwell	Tathwell has a site large enough to meet the community standard, but it has no formal access. There is a site that meets NE standards at the local level (Sotby Wood) and at a medium level the Burwell Woods cluster is of a sufficient size but only has partial access. There is also a pleasant area of open space by the church that is within 300m of all the properties in the heart of the village but this just falls below NE size standards at a community level. There are also eight additional sites of below the medium threshold, measuring 5.181 to 60.712ha within 5km; four of these are formally accessible by the public, including Legbourne Wood (34.9ha) and Maltby Wood (60.7ha). There is no strategic level of provision. The level of provision is unlikely to be increased through housing development in the Parish.	LM

Tattershall Thorpe	Tattershall Thorpe has provision to meet to community, local and medium scales. Tattershall Carrs Trust Reserve provides for 83% of the population at a community level, only leaving a small area at the north west of the village with no access. At a local level there are six publicly accessible sites in and around Tattershall, two of which are also large enough to meet the medium standards. There are three additional sites that meet the medium scale of provision, although only 1 of these has formally access. Below that level, there are six smaller sites that add to provision, most of these are sports related and only three of the sites have open access. There are also ten additional sites within 5km that do not meet NE medium standards for size, but add to opportunities locally; three of these are freely accessible to the public. There is one site within 5km that falls just short of the NE standards but this is publicly inaccessible. Unfortunately there is no site of strategic size in this part of the district.	CLM
Tetford	There are no sites meeting NE standards at any level to serve Tetford. There are however eight sites within 2km of the village below NE standards of between 2ha and 10.6ha but only one of these is accessible. There are also a number of very small sites within 5km radius but none meet NE standards and again only two are accessible. Snipe Dales SSSI Trust Reserve (87ha) is only just outside the 5km cordon. Unfortunately there is no site of strategic size in this part of the district. There are a number of footpaths around the village that would enable a looped walk of varying lengths predominantly off road.	F
Tetney	Tetney has provision at the community level through the Tetney Blow Wells SSSI, Golf Course and playing fields, together, these provide for 73% of the population with the gap being at the eastern side of the village, although the golf course is only accessible via a public footpath. There is no local level of	CMS

	provision, but there is at the medium and strategic levels through the Coastal habitats. Also, within the 5km (although outside East Lindsey) there is a site of publically accessible site 64ha – Cleethorpes County Park.	
Theddlethorpes	There is provision to NE standards at the local, medium and strategic level courtesy of the Saltfleet to Theddlethorpe Dunes SSSI, although there are no other sites around the village to provide choice. There is no provision at a community level, with the playing fields and churchyards being too small to meet NE standards and the SSSI too far away. Below the NE standards, there are few smaller sites but these are either not accessible to the public or are smaller sports facilities.	LMS
Thimbleby	There no community provision at Thimbleby. Local level of provision can be met through Ashby Park Fishing Ponds, which also includes a Local Wildlife Site but this is not freely accessible through formal public footpaths. There is also medium provision through Highall Wood and a number of smaller sites on the west of Woodhall Spa. Below this level, there is a selection of small sites within Horncastle and within 5km there is a good selection of smaller sites to help biodiversity (although they do not provide a network) but only two of these have formal public access. It is unlikely that this situation is going to be improved through development.	M
Thorpe St Peter	There is only natural and semi-natural greenspace provision at a strategic level, along the Coast and few sites of any size falling below those thresholds. However, it is unlikely that this situation is going to be improved through development, given the small size of Thorpe St Peter.	S
Toynton All Saints	There are no natural and semi-natural greenspace sites in or around Toynton All Saints meeting any level of NE standard. There is a site of 2.6ha close to the village which used to be a Trust	F

	<p>Reserve, but this no longer has that status and has not yet been resurveyed as a Local Wildlife Site so its future status is undetermined. There are a number of footpaths around the village that would enable a looped walk of varying lengths predominantly off road. Below the NE level, there are five sites within 2km, although two of these would require organised access, there is one (11.9ha – Keal Carr Trust Reserve) that is freely accessible. Within 5km, there are a further two sites, one with public access (Sow Dales Trust Reserve) and the other with partial access (Mavis Enderby Valley) that fall below size standards but add to provision.</p>	
Toynton Fenside	<p>There are no natural and semi-natural greenspace sites in or around Toynton Fenside meeting any level of NE standard and it is unlikely that this situation is going to be improved through development. Below NE standards, there is a site within 2km but this is not accessible and within 5km there are a number of smaller sites but only one (Keal Carr Trust Reserve – 11.9ha) of these is widely accessible.</p>	
Toynton St Peter	<p>There are no natural and semi-natural greenspace sites in or around Toynton St Peter meeting any level of NE standard and it is unlikely that this situation is going to be improved through development. There are a number of footpaths around the village that would enable a circular walk of 2.5km (1.5miles) predominantly off road. Below NE standards, there is a site within 2km but this is not accessible and within 5km there are a number of smaller sites but only one (Keal Carr Trust Reserve – 11.9ha) of these is widely accessible.</p>	F
Tumby Woodside	<p>Tumby Woodside has sites of a size to meet local NE standards, with two sites within 2km (one of which is also large enough to meet medium standards), however, neither of these sites are publicly accessible. Below NE thresholds, there is one site within 2km but it is not accessible. There are two sites within 5km that meet medium</p>	M

	standards but only one of these is publicly accessible. Below this, there are eight sites which add to biodiversity in the area; five of these are widely accessible. There is no community level of provision.	
Ulceby	Ulceby has a site of the size to meet medium level provision but this site is not formally publicly accessible. NE standards are not met at a community, local or strategic level. There are three small sites within 1km but below the NE standards and not accessible to the public. There are a number of smaller sites within 5km (such as Hoplands Wood Trust Reserve (23.5ha) that are accessible and add to local provision while not meeting the size standards.	
Utterby	Utterby has natural and semi-natural greenspace to meet the medium NE standards through Covenham Reservoir; however, there is no community, local or strategic provision. Within 2km is an area of permissive open access, until 2012, at Brackenborough. Just over the 2km threshold is Yalta Wood (3ha) which has public access. There are too small sites within 5km but these are not accessible to the public, public footpaths run along the edge of the sites but not within in. In addition, the public footpath network provides a circular walk of 1.1 km (0.7 miles) predominantly off road.	M
Wainfleet All Saints (included in the LDF as The Wainfleets)	The NE standards are met at a medium and strategic levels through the coast and Gibraltar point but not at a community or local level. The 55% of the population are within 300m of the school playing fields, but these are not always available to the wider public and do not meet NE definition of natural greenspace. There are key pieces of greenspace within Wainfleet, including the river and the cemetery, but these do not meet NE levels. However, there is a good public footpath network although these do not form strong circular routes off road. There may be some opportunities to improve local natural and semi-natural greenspace through the LDF although possibly not	MS

	to NE levels.	
Wainfleet St Mary (included in the LDF as The Wainfleets)	The NE standards are met at a medium and strategic level through the Coast and Gibraltar Point, but not at a community or local level. There are key pieces of greenspace within Wainfleet, including the river, but these do not meet NE levels and sports pitches which are not considered accessible natural greenspace. However, there is a good public footpath network although they do not form strong circular routes off road. It is unlikely that development in Wainfleet St Mary alone would be sufficient to enable the level of provision to be improved.	MS
Well	There is no community provision at Well. There are three small sites within 2km of Well, which fall far short of the NE standards but add to biodiversity; one of the sites (9.765ha – Rigge Wood) is publicly accessible. There is a site that meets medium NE size standard (Welton Woods) but the site is not formally accessible to the public; there are seven additional sites (of between 1 and 48ha) within 5km but falling below NE standards four of which are accessible to the public, the largest being Hoplands Wood Trust Reserve (23.5ha).	
Welton le Marsh	The NE standards are capable of being met at a local level, and one of the sites is large enough to meet medium scale standards (Welton Woods) however, the sites are not formally accessible by the public. There is no community level of provision within Welton le Marsh. But the public footpath network provides a circular walk of 1.1 km (0.7 miles) predominantly off road. There is no strategic level of provision. Below NE standards, there a number of sites adding to biodiversity, some of which are accessible to the public, including Rigge Wood (9.75ha) and Hoplands Wood (23.5ha).	F
Welton le Wold	NE standards are not met at any level at Elton le Wold. There is a good public footpath network in the Parish, although not necessarily linking strongly into the	

	village. Below NE standards there are three sites within 2km and within 5km there six sites two of which are publicly accessible.	
West Ashby	West Ashby meets the NE local size criteria through Ashby Park and the Golf Course, but these do not have formal public access for the general public not using the facilities. Unfortunately, NE standards are also not met at any other level. Below NE standards is also poor provision, with a few small sites within 2 and 5km but none of them accessible.	
West Keal	There are no sites meeting NE standards in and around West Keal, however that does not mean a lack of sites. There are three sites of 2, 3 and 11ha (Keal Carr Trust Reserve) within 2km; two of which are publicly accessible. Sow Dales (34ha) lies just over the 2km cordon. The public footpath network provides a circular walk of 1.1 km (0.7 miles) predominantly off road.	F
West Torrington	West Torrington meets ANGSt criteria at a medium and strategic level through Willingham Woods. There are no sites meeting NE standards at other levels, indeed the supply around the village is low. There are also a few smaller sites within 5km but only two of these, in a woodland cluster outside of East Lindsey, have public access but they are below the size set in the criteria. It is unlikely that this situation is going to be improved through development as significant areas of greenspace would be needed to meet the standards.	MS
Willoughby	Willoughby has three sites that meets the NE standards at a local level, however, although two of the sites form a cluster within 2km that is large enough to meet medium standards (Welton Woods), it is not formally accessible to the public, so there are no sites meeting medium level of provision. The other sie (Hoplands Wood Trust Reserve) does have public access. There are no sites meeting the community standard, although there are some valuable areas of open space within the	L

	village. Below NE standards, there are five smaller sites within 2km, four of which are accessible. There are a number of public footpaths around the village, however these do not form a circular route of any great distance.	
Winthorpe	NE levels are met at a local, medium and strategic scale through the coast; this also provides the community level for some of the community but not all. It is unlikely that this situation is going to be improved significantly through development in Winthorpe alone.	LMS
Withern	Withern has provision at a strategic level along the coast. However, there is no community, local or medium scale provision. There is a site that meets local standards but it is not accessible to the public. Community provision may be possible in the future, but it is unlikely that a local or medium scale site could be provided through development alone in Withern. Within 5km there are a number of small sites but only four have public access, the largest of these is the cluster at Muckton wood (27.845ha).	S
Wood Enderby	Wood Enderby has two site large enough to meet local standards, indeed one also meets medium standards, but it neither are formally accessible to the public. There are four sites large enough to meet medium scale, within 5km two of which form a cluster and are publicly accessible. Unfortunately, there is not strategic scale site in this part of the district. Below NE standards, within 2km there are three small sites but only the roadside verge is accessible to the public. Within 5km there are a large number of smaller sites, with half of them accessible.	M
Woodhall Spa	Woodhall Spa is very well blessed at a community and local scale. There is strong community provision, but this is in clusters and so only covers approx 50% of the population and some of this is recreation space not meeting the ANGSt definitaion, the gaps being predominantly the southern part of the village and the western end and opportunities should be sought to fill	CLM

	<p>these gaps. Of the local level sites, two also meet the medium scale. There is a further site at a medium level but this is not accessible. Unfortunately, there is not strategic scale site in this part of the district. Below NE level there are a number of additional sites that contribute to accessible greenspace and biodiversity in the area.</p>	
Wragby	<p>While there are small pockets of greenspace in and around Wragby, such as the churchyard (0.175ha), the cemetery (0.5ha) and the sports facilities, adding to accessible provision but they do not all meet NE definition of natural greenspace. The football ground is the only piece of open space meeting NE community level standards and this is accessible to approximately 17.5% of the village but again, does not meet NE definition of natural greenspace. However, there are two accessible sites at a local level (outside East Lindsey but in Wragby's catchment) and two accessible areas meeting medium scale standards, one of which is a large cluster of sites (Chambers Wood) that amply meets requirements. Strategic level provision is met through Willingham Woods. There may be opportunities to increase the amount of local natural and semi-natural greenspace through development, particularly at the community level.</p>	LMS *
Yarburgh	<p>Yarburgh meets NE standards at a medium (Covenham Reservoir) and strategic scale (North Lincolnshire Coast NNR) but there are no community or local sites, even below NE thresholds, the only sites are the churchyard, which is only 0.26ha and Brackenborough Wood (9ha). This situation is unlikely to be improved significantly through development.</p>	MS *
